KYNOTA

Better Science Faster

Leverage KYNOTA to get from zero to
Run-to-Run dashboards in eight weeks.

The pressure to reach the market first has created an increased need for efficiency and speed at all stages of development and manufacturing. Traditional methods of data collection, analysis, and transfer come with many challenges including islands of information, tedious manual data entry and cleaning, disparate data sources, and experimental analysis. These hurdles prevent scientists from performing better science faster and increase the potential for errors that lead to financial setbacks, compromised resources, and delayed delivery of therapies to patients. Partnering with KYNOTA Data will allow you to spend more time focusing on innovation and experimentation, increasing efficiencies, and decreasing time to market.

> Is too much of your time spent manually entering and re-entering data into disconnected databases along with other tedious repetitive tasks?

> How long does it take you to perform an investigation on a process anomaly?

> When was the last time leadership asked if/when your lab will be implementing Machine Learning, Artificial Intelligence, and/or Digital Twins?

KYNOTA Data Platform

KYNOTA Data supports your lab's data with a stable, reliable, and future proof solution. We connect the entire laboratory ecosystem and eliminate non-development activities like manual and tedious data management activities associated with biopharma. This ensures data is findable, accessible, interoperable, and reusable.

Differentiators

- **Our team**
  Our subject matter experts have extensive knowledge of life sciences technologies across the drug development continuum and are ready to work with you on producing the best results for your lab.

- **Our partnerships**
  We treat our clients like partners and listen to their feed back to make sure they have the right solution, right support, right away.

- **Site specific support**
  Every site we work with is assigned a focused technical lead familiar with your facility and needs making sure you get fast and applicable support.

- **New technology, no problem**
  KYNOTA Data is an evergreen solution. We are regularly rolling out new functionality and will help you adopt new technology. Our mission is to make you successful so that patients get treatments faster.

Dynamic Functionality

Connect, collect, and contextualize your experimental data in real-time, stored in one place, and made ready for new analytical modalities

- Bioreactor Data
  - pH
  - DO
  - Temperature
  - Etc.

- Off-line & At-line Analyzers
  - Viable Cell Density
  - Blood Gas Analyzers
  - Metabolite Analyzers
  - Cell Counters
  - Spectroscopy
  - Etc.

- Disparate Lab Systems
  - Historian
  - (ELN) Electronic Lab Notebook
  - (LIMs) Laboratory Information Management System
  - Etc.
